

## Recommended Installation Sequence for Adobe Photo Deluxe Business Edition (Win 98, 98SE, ME, 2000, XP) The same program CD is used for all Windows versions.

1. Place the CD in the CD-drive and let it boot to the initial menu.
2. Click the button named **Step 1: Install Photo Deluxe Business Edition**
3. Then click the button named **Install Photo Deluxe Business Edition**. The system will begin the setup and come to the Welcome screen.
4. Click **Next**. With Typical installation selected, click **Next**.
5. On the Selection File Types window, click **Next**.
6. On the Question window indicating if you have a digital camera, click on **No**, even if you have a camera.
7. On the User Information window, click on **An Individual** at the top and enter "...." for the First Name and "....." for the Last Name. Identifying yourself to Adobe only generates email advertisements. Click **Next**.
8. On the Setup Window confirming your name ".... ..", click **Yes**.
9. On the Start Copying Files window, click **Next**.
10. Following the installation of Adobe Photo Deluxe, the system will prompt you to install Adobe Type Manager. On this screen click **Cancel**.
11. The system now prompts you to do an online registration. Click **Finish, Cancel**, then **Yes** to confirm the cancelation. No registration information is sent to Adobe.
12. A movie tutorial begins to play. You can watch the movie or cancel it with the **X** in the upper-right corner.
13. The system now suggests that you restart your computer. Click **Yes** to reboot your computer.
14. When your computer reboots and comes back to the desktop, you will see an icon for Adobe Photo Deluxe. Usually, not all of the icon name uses 4 lines to display, so I rename it with a shorter name. Right-mouse on the icon and type **Adobe Photo Deluxe** and press **Enter**.
15. Right-mouse again on the desktop icon and left-mouse on **Properties**. click on the Shortcut tab at the top. In the Start in field you will see a reference to ""C:\Program Files\PhotoDeluxe BE 1.0"". Change the double-double quotes to be a single set of double quotes, "**C:\Program Files\PhotoDeluxe BE 1.0**".
16. In the Run: line you will see the value Normal. Click on the black down arrow at the right of the field and click on **Maximized**. This will cause Adobe Photo Deluxe to open maximized (filling the entire screen area) when it starts. Click **OK** at the bottom to close the window and return to the desktop.
17. Start Adobe Photo Deluxe by double-clicking on the desktop icon.
18. When the program has completely loaded, click on **File** in the upper left corner, **Preferences**, and **Long Menus**. This will cause the full display of menu items across the top of the display window.
19. If you are running Windows XP, do the following. Click on **File, Preferences, Scratch Disks**. Click on the black down arrow next to the **Secondary Scratch Disk** and change it to either **D:\** or **C:\** (D is preferred). Then change the Used by PhotoDeluxe percentage to read **90** percent. Click **OK** to close the window.
20. If you have a scanner attached to your computer, click on **File, Open Special, Scan Photo**. The first time you use this option, your scanner name will appear in a window. Click on the **scanner name** and click **OK**. If you ever need to change to a different scanner (because more than one scanner appeared in the initial scanner selection screen, and the one you selected isn't working), click on **Get & Fix Photo** in the upper-left of the screen, **Get Photo, Scanners, 1 Scanner, Choose Scanner**, then click on a new scanner of your choice and click **OK**.
21. Adobe Photo Deluxe is now ready to activate your scanner, edit pictures, and store them in the format of your choice. Refer to the extensive Help section within Adobe Photo Deluxe, or review the video training CD **Working With Digital Photos A to Z** available from Computer Genealogy Specialists at [www.cgslink.com](http://www.cgslink.com).

Good luck.
